The main constraints in the ruminant production systems in the tropics are low availability and quality of forage during the dry season. An alternative that could mitigate the lack of food during periods of scarcity is the use of trees/shrubs in fodder banks. However, the growth and production response of these plants may be influenced by several factors. The aim of the study was to evaluate ...

I recently visited ECHO and saw this mulberry hedge:. Mulberry trees aren't just great sources for delicious berries – they're also good for feeding animals. Some varieties even make leaves that are a good cooked green for the table – but you'd have to ask my friend Josh Jamison at H.E.A.R.T. about that. He's growing a wide variety and testing them for flavor.

The moringa forest looked more like a camphorweed forest, but the baby moringa trees we planted as seed were in there, stubborn, waiting for us to come and carefully, gently provide them with some light. The tithonia and cosmos flowers that self seeded in our gardens burst into color in July, and were soon literally covered in butterflies.
