### (PDF) SOL Nagle, Saff, Snider 4ed | Mauricio García ...

Suppose  $(x,y,z)$  and  $(x,y,z)$  refer to coordinates in two systems that have a common origin at the satellite's center of mass. Fix the  $xyz$ -axes in the satellite as principal axes; then let the  $z$ -axis point toward the primary and let the  $x$ -axis point in the direction of the satellite's velocity.

The solutions manual that goes with this book is by far the best solutions manual I've ever seen. It actually goes from start to finish on how you work out most of the problems. You may have to research some math from previous math classes to figure out how they got to one step in the solution, but it's never anything major.
